

KerioMailServer 6

for messaging and collaboration

Kerio MailServer is a messaging and collaboration suite that provides businesses with mobile and desktop email, allowing them to share data, schedule tasks, and better collaborate in workgroups. The integrated anti-virus, powerful anti-spam, directory service, and easy admin interface, make Kerio MailServer a perfect choice for any small business.

SECURE MESSAGING

Dual engine anti-virus protection

Since most viruses and worms spread primarily through email, Kerio MailServer scans each message across all delivery protocols, making sure that users can neither receive nor send any infected messages.

Kerio MailServer can scan simultaneously with the integrated McAfee Anti-Virus and one additional third party engine, significantly increasing the chances of catching new viruses at first outbreak.

Kerio MailServer with integrated McAfee Anti-Virus further simplifies management with its automated virus database update and no-nonsense configuration.

Supported third-party anti-virus products

Administrators can choose from a number of third party anti-virus products offered by such leading vendors as Alwil, Computer Associates, Eset, Grisoft, Sophos and Symantec, or the open source ClamAV.

Anti-spam protection

Kerio MailServer offers a variety of weapons in the war on spam. The fight is waged at two fronts: preventing Kerio MailServer users from receiving spam, and preventing the server itself from being exploited by spammers.

Advanced anti-spam tools

Kerio MailServer defends against Directory Harvest Attacks and blocks blacklisted spammer IP addresses as well as spam bombing attacks.

Messages from known senders recorded in the Address book are automatically whitelisted, minimizing false positives and contributing to a better user experience.

SpamAssassin and Spam Repellent

SpamAssassin, powered by a Bayesian spam filter, analyzes the content of all received messages and weeds out spam. Users can train SpamAssassin using Junk mail buttons in Outlook, WebMail or simply by moving spam messages to Junk email folder in any other email client.

Spam Repellent helps fight off spam zombies by delaying the SMTP handshake, effectively cutting off impatient spam robots.

Directory services

Kerio MailServer authenticates users natively to Microsoft Active Directory and Apple Open Directory, in addition to offering an internal database for user authentication and management.

Secure remote administration

Kerio's Administration Console, available for all three supported platforms, lets administrators remotely control and monitor all aspects of Kerio MailServer.

Kerio MailServer management can delegate limited domain administration to select users who then may create and delete accounts in their respective domain conveniently through a simplified web interface.

Backup and archiving

Administrators can backup all user data and server configuration to another server or storage device for easy recovery.

For legal and compliance purposes, Kerio MailServer allows companies to archive all incoming and outgoing messages as they are delivered.

INDUSTRY AWARDS

"I designate Kerio MailServer as my Editor's Choice for its well-rounded feature set, which was designed with the needs of SMBs in mind. Implementing Kerio MailServer should be a relatively easy experience for users and not particularly difficult for administrators. Overall, I found working with Kerio MailServer a pleasure."
John Green

"...With its dedication to security, ease of administration, and flexibility, Kerio MailServer is simply spectacular right out of the box."
Michael Genrich

ABOUT KERIO

Innovating in Internet security and messaging since 1997, Kerio Technologies Inc. provides Internet messaging and firewall software solutions for small to medium sized businesses across the globe. Kerio's corporate headquarters are located in Santa Clara, California.

KerioMailServer 6

for messaging and collaboration

EASY COLLABORATION

Collaborative messaging

Kerio MailServer helps teams to become more efficient using email as their primary collaboration tool. Kerio MailServer integrates with Microsoft Outlook, Microsoft Entourage, Windows Mobile devices, and Kerio WebMail to provide user access to email, calendars, notes, tasks, and contacts.

Kerio WebMail

Available in 16 languages, Kerio WebMail is a full-featured email client as powerful as most desktop clients. Users can send and receive messages, lookup contacts in multiple address books, schedule meetings, edit notes, share calendars or even get notified of upcoming events.

The free/busy service keeps track of attendee availability for scheduling calendar events.

Mobile email

Kerio MailServer actively pushes email to a variety of smartphones and synchronizes

contacts, calendars and tasks without a third-party application or server. Smart Wipe enables administrators to remotely delete all sensitive data from lost or stolen phones.

Outlook and Entourage synchronization

With support for Microsoft Outlook and Microsoft Entourage, Kerio MailServer lets users easily access and share their email data, contacts, and calendars, and connect to public email folders using the leading business groupware clients for Macs and PCs.

iCal and Address Book

Kerio MailServer allows Mac users to subscribe and publish calendars from iCal and synchronize their contacts using Address Book.

Mailing lists

Discussion groups and mailing lists can be easily created with individual policies regarding subscription and message posting.
